Why {shiny}

- Rapidly deploy R you analysis as web app
- Build without Linux- and web-programming knowledge
- … but is extendible with HTML, CSS, JavaScript
- **Easy to code, easy to deploy**

Some use cases

- Explore your data **interactively** without need to continuously rerun your code
- **Allow others** coworkers/boss/client **to explore** and draw conclusions themselves
- Setup **dashboards** to visualize incoming data in real time
- Build data analysis **applications**

# The UI, server and reactivity

The UI / server structure

Changed settings

User
Updated figures

UI: What and where inputs and outputs are in the web page

Server: Generate outputs based on inputs

Reactive programming

1. User change setting

2. Code linked to that input is reexecuted

3. Figures linked to that code is updated

In **reactive programming** (and {shiny}), code is executed "**on demand**"

↕

In contrast to "common" programming (also called **imperative programming**) where things are executed **in order**

*Simplified!

# Illustrating reactive programming

A very minimal app

```
ui <- fluidPage()

server <- function(input, output) {}

shinyApp(ui=ui, server=server)
```

UI

Server
```
ui <- fluidPage()
```

```
server <- function(input, output) {}
```

Changed settings

User

Updated figures

Create the app!
```
shinyApp(ui=ui, server=server)
```
The UI

! Take note of the ids "bins" and "distPlot", they will be used in the server side

```
ui <- fluidPage(

    titlePanel("Old Faithful Geyser Data"),

    sidebarLayout(
        sidebarPanel(
            sliderInput("bins",
                        "Number of bins:",
                        min = 1,
                        max = 50,
                        value = 30)
        ),

        mainPanel(
            plotOutput("distPlot")
        )
    )
)
```

Old Faithful Geyser Data

Number of bins:

Histogram of x

The server

```
server <- function(input, output) {

  output$distPlot <- renderPlot({
    x <- faithful[, 2]
    bins <- seq(min(x), max(x), length.out = input$bins + 1)
    hist(x, breaks = bins, col = 'darkgray', border = 'white')
  })
}
```

Old Faithful Geyser Data

The code generating this figure

Today's workshop

- Gradual introduction to core aspects of {shiny}
- Example code and exercises
- At the end you will have built a fully functioning web app

Hands-on materials
https://jakob37.github.io/ShinyFromScratch

And please - feel free to ask questions! Any question you have likely many others have too.

Hands-on time

Up until "Preparing a dataset"
(~row 106)

Don't hestitate to ask questions!

The dataset

GAPMINDER

- Life expectancy values in countries 1800-2030
- Pre-parsed from wide- to long- format to fit {ggplot}
- Feel free to use your own data!

Wide format

country	1950	2000
Sweden	65	80
Denmark	66	82

Long format

country	year	life
Sweden	1950	65
Sweden	2000	80
Denmark	1950	66
Denmark	2000	82

https://www.gapminder.org/data

Two slides on ggplot2 and dplyr

**{ggplot2}** Popular and flexible package for **building visuals** in R

{dplyr} Intuitive data slicing functions (here we mostly use **filter**)

The **ggplot** command

```
ggplot(df, aes(x=height,y=weight)) + geom_point()
```
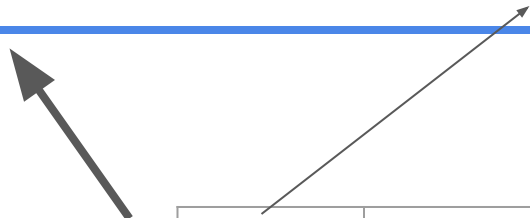

df

height	weight
180	75
165	45
170	60
164	53

The **filter** command

```
df %>% filter(height >= 170)
```

df

height	weight
180	75
165	45
170	60
164	53

height	weight
180	75
170	60
Hands-on time

Up until "Setting up the server" (~row 275)

Don't hestitate to ask questions!
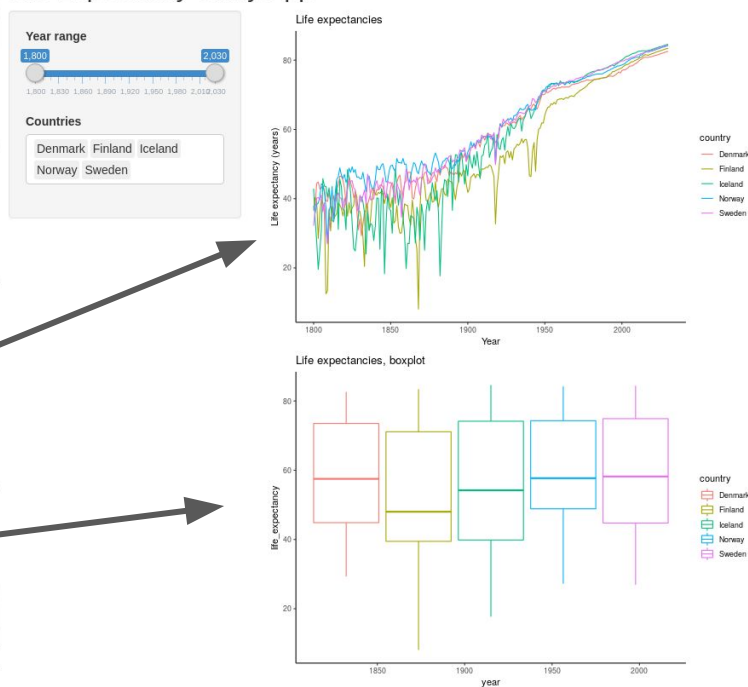

Hands-on time

Up until "Showing the data using multiple plots" (~row 426)

Don't hestitate to ask questions!

The **reactive** statement

```
server <- function(input, output) {

    data_long_filtered <- reactive({
        data_long %>%
            filter(country %in% input$countries) %>%
            filter(year >= input$year_range[1] &
                year <= input$year_range[2])
    })

    output$year_range_plot <- renderPlot({
        ggplot(data_long_filtered(), … ) …
    })

    output$year_range_boxplot <- renderPlot({
        ggplot(data_long_filtered(), … ) …
    })

}
```

Life Expectancy Shiny App

(Final) Hands-on time

Don't hestitate to ask questions!

Thank you for participating!
